

Discover the DITEQ Difference!

Final Polishing Steps with Vortex Restoration Pads

The Vortex Restoration diamond impregnated pads are aggressive and are designed to be used as part of the final steps during initial polishing using either a 17" Swing machine or a 20" Burnisher.

Use the following specs for the final steps after grinding up to either 200 or 400 grit and using densifier. This will allow you to get a faster and better shine when the job is finished.

Restoration Series

	Grit	17" Swing Part No.	20" Burnisher Part No.
Step 1	400 Orange	161295	161296
Step 2	800 Silver	161303	161304
Step 3	1800 Blue	161311	161312
Step 4	3000 Red	161319	161320
Final Step	Buff Black (Dry)	161327	161328

The Black Buff pad will erase all the resin swirl marks no matter what step you decide to stop at

NEW

17" TEQ-Swing Machine

- 1.5 hp motor
- 17" cleaning path
- Triple planetary gears
- Compact folding for easy shipping and storage

Specifications:

Frame Construction	Structural Foam
Gears	Triple Planetary
Gear Box Material	Polyethylene
Handle Material	Plated Steel
Weight	90 lb.
Pad Width	17"
Motor Power	1.5 HP AC
Amps	12.5
Motor RPM	175
Pad Pressure	90 lb.
Part No.	G00038

NEW

20" TEQ-Burnisher Machine

- 1.5 hp motor
- Multi-grooved drive belts
- 20" polishing width

Specifications:

Frame Construction	Steel
Gears	Belt Drive
Weight	112 lbs
Brush Width	20"
Brush Motor Power	1.5 hp DC Rectified
Amps	15
Brush RPM	1500
Power Cord Length	50 Foot
Part No.	G00039

M-Series Maintenance Pads

DITEQ's diamond impregnated pads polishes as it cleans the surface. DITEQ's maintenance diamond pads bring back the shine of the polished floor by mechanically removing micro scratches with no resin transfer to grout lines. Use to maintain polished concrete, marble and stone floors.

R Series Restorative

These diamond impregnated pads are too aggressive for use in daily maintenance and should be used on unpolished (rough) concrete floors as a part of the final steps during initial polishing.
